DETAILED ACTION

Allowable Subject Matter

1. Claims 1-8, 13, 20, 43, and 53 are allowed.
2. The following is an examiner's statement of reasons for allowance:

The present invention describes a method and apparatus of transmitting a base stream of data and an enhancement stream of data in a wireless communication system, comprising coding and modulating the base stream to obtain a first data symbol stream, wherein the base stream is designated to be received by a plurality of receiving entities; coding and modulating the enhancement stream to obtain a second data symbol stream, wherein the enhancement stream is designated to be received by at least one receiving entity, and wherein the coding and modulating for the base and enhancement streams are not dependent on channel realizations of receiving entities for the base and enhancement streams; processing the first data symbol stream in accordance with a first spatial processing scheme to obtain a first plurality of symbol substreams; processing the second data symbol stream in accordance with a second spatial processing scheme to obtain a second plurality of symbol substreams, wherein the processing for the first and second data symbol streams is not dependent on the channel realizations of the receiving entities for the base and enhancement streams; and combining the first plurality of symbol substreams with the second plurality of symbol substreams to obtain a plurality of transmit symbol streams for transmission from a plurality of transmit antennas, wherein the combining is performed using a

Art Unit: 2611

superposition scheme for; a) scaling the first plurality of symbol substreams that are hierarchically coded with a first scaling factor to obtain a first plurality of scaled symbol substreams, b) scaling the second plurality of symbol substreams that are hierarchically coded with a second scaling factor to obtain a second plurality of scaled symbol substreams, and c) summing the first plurality of scaled symbol substreams with the second plurality of scaled symbol substreams to obtain the plurality of transmit symbol streams. The closest prior art, Wu et al. (US 2002/0088005 A1) in view of Thomas et al. (US 6,987,819 B2) and Lozano et al. (US 6,778,612 B1) discloses a similar system and method but fail to disclose processing the first data symbol stream in accordance with a first spatial processing scheme to obtain a first plurality of symbol substreams; processing the second data symbol stream in accordance with a second spatial processing scheme to obtain a second plurality of symbol substreams, wherein the processing for the first and second data symbol streams is not dependent on the channel realizations of the receiving entities for the base and enhancement streams; and combining the first plurality of symbol substreams with the second plurality of symbol substreams to obtain a plurality of transmit symbol streams for transmission from a plurality of transmit antennas, wherein the combining is performed using a superposition scheme for; a) scaling the first plurality of symbol substreams that are hierarchically coded with a first scaling factor to obtain a first plurality of scaled symbol substreams, b) scaling the second plurality of symbol substreams that are hierarchically coded with a second scaling factor to obtain a second plurality of scaled symbol substreams, and c) summing the first plurality of scaled symbol substreams with the

Art Unit: 2611

second plurality of scaled symbol substreams to obtain the plurality of transmit symbol streams. With respect to the Sampath reference (US 7,149,254 B2) cited in the IDS filed on 11/24/2009, Sampath fails to disclose processing the first data symbol stream in accordance with a first spatial processing scheme to obtain a first plurality of symbol substreams; processing the second data symbol stream in accordance with a second spatial processing scheme to obtain a second plurality of symbol substreams, and the combining step comprising a) scaling the first plurality of symbol substreams that are hierarchically coded with a first scaling factor to obtain a first plurality of scaled symbol substreams, b) scaling the second plurality of symbol substreams that are hierarchically coded with a second scaling factor to obtain a second plurality of scaled symbol substreams, and c) summing the first plurality of scaled symbol substreams with the second plurality of scaled symbol substreams to obtain the plurality of transmit symbol streams. This distinct feature has been added to the independent claims 1 and 20, thus rendering claims 1-8, 13, 20, 43, and 53 allowable.

Any comments considered necessary by applicant must be submitted no later than the payment of the issue fee and, to avoid processing delays, should preferably accompany the issue fee. Such submissions should be clearly labeled "Comments on Statement of Reasons for Allowance."

Any inquiry concerning this communication or earlier communications from the examiner should be directed to SIU M. LEE whose telephone number is (571)270-1083.
